Create a video in the Photos app that tells your story with music, text, motion, and 3D effects.

Create a video, automatically

The easiest way to create a video is to let the Photos app do it for you. In Photos, select **Create > Video remix** and select the photos and videos you want to include. Or open an album and select the play button to create a video automatically. Select **Remix it for me** to instantly change its look and feel by recombining images, music, and styles.

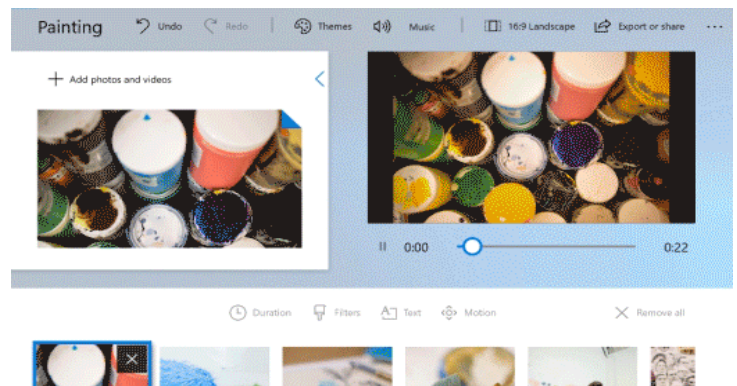

For more control over how your video looks and

sounds, select **Edit a copy**. You'll find options for adding text, music, motion, filters, and 3D effects.

Create a video from scratch

To create a new video that you can edit from start to finish, select **Create > Video project**. Select the photos and videos you want to include, select **Add**, and then name your Video.

To change the look and feel of each photo or video clip you've included, select the clip at the bottom, and then select a button like **Trim** (for video clips only), **Filters**, **Text**, or **Motion**. To apply a theme that changes filters, music, text style, and motion for the whole video at once, select **Themes**.

Add music

To add or change the music for the whole video, select **Music** near the top. If you choose one of the recommended songs, the music will automatically adjust to the length of your video.

Add 3D effects to video clips

If you've included a video file as part of your project, you can add 3D effects to it (like a lightning bolt, sparkles, or butterflies that flutter through the scene). To do this, select the video file at the bottom of the video project, select **3D effects**, and then select the effect you want to add. Drag the edges of the effect to adjust its size and placement.

To trim a video clip, select **Trim**, drag the white circles to where you want the video to start and end, and then select **Done**.

Share your story

When you're done editing your video and ready to share, select **Export or share**. Choose a file size, and when it's ready, select **Share to social media, email, or another app**.
